

UPKEEPER[®] GUTTER KEEPER

US Patent 6,170,118; US Patent Pending 60/784,247

Shown here is the [Gutter Keeper](#), a remarkable new machine that cleans gutters and downspouts in less than half the time than conventional methods.

Collects waste into 55 Gal. disposable plastic bags so there's no mess to clean up at the end of the job.

Cleans gutters and downspouts up to 25 feet WITHOUT A LADDER!

Generates a powerful 2000 CFM at 25" of static pressure for the toughest jobs.

Easily removes tightly packed wet leaves and soil, even rooted plants with no problem at all!

Extremely flexible, lightweight and cleanup is quick and easy.

It can be used as a stand alone unit (as shown here) or quickly and easily mounted to your golf cart, truck or just about any utility vehicle, transforming them into fast easy litter collectors.

gut-ter keep-er [**guht-er**] [**kee-per**]

-noun

1. a simple and effective machine designed to solve the age old problem of cleaning out rain gutters.

The two key elements with any type of vacuum system is CFM (cubic feet per minute) and Static Pressure (water lift), the type and volume of debris are both factors in balancing the two elements.

Through extensive research and field testing of the Gutter Keeper, we believe we have achieved the proper balance to effectively clean rain gutters. The Gutter Keeper produces 2000 CFM of air flow and 25" of static pressure when using 3" tubing for gutter cleaning; and 4" tubing for ground debris collection.

The “Gutter Keeper Complete Package” includes:

- Gutter Keeper base unit:
Powered by a 5 HP blower producing 2000 CFM and 25" of static pressure using our patented hinged manifold and, 3 panel clear 44 gallon waste container which bags waste for ease of disposal, plus lid assembly with filters and disposable ply bags. Filters are reusable, easy to remove, and easy to clean.
- Gutter cleaning hoses, tubes and tips:
25' of clear 3" hose, (3) 5' and (2) 2.5' clear extension tubes.
Tip sizes included are: (1) 1-5/8" by 3-3/4" and (1) 2-1/8" by 3-1/4" other sizes are also available.
- Downspout pressure hose assembly:
15' of clear 3" downspout pressure hose.
Used for unclogging and/or cleaning of downspouts by attaching pressure hose to blower and bottom of downspout, used in conjunction with suction at the top of the downspout this method works remarkably well.
- Ground debris collection tools:
10' of clear 4" hose and 4" Intake chute assembly.
Perfect for collection of debris around shrubbery, footpaths and hard to reach areas.

The machine weighs approximately 200 lbs and is approximately 6' by 2½' by 4' tall. The base unit is equipped with large and very durable outdoor wheels and a brake. As with all of our products, the Gutter Keeper will be available worldwide.

History of the Gutter Keeper

The Gutter Keeper came into being when it became obvious that a safe, non-damaging method to clean rain gutters was sorely lacking in the market place. This discovery came about in 1995 when Upkeeper CEO Mr. Paul McIntyre, using the Voyager Turbo® and overhead cleaning extensions decided to test the product on his gutters at home.

Having seen how well it worked, the potential for the machine was apparent. Mr. McIntyre and the design team assessed the project, and after several years of extensive research and field testing, the Gutter Keeper unit was created.

The design was completed in 2004 and several units were produced for field testing in the US-NC market. As is the case with all Upkeeper products, the Gutter Keeper has evolved through the years into what we believe is the best solution to an age old problem. At Upkeeper we strive to continually improve and expand our product line with our Professional Consultant Program. [Which can be read about here.](#)
